DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 8-18 and 21-22, drawn to a method for suppressing or ameliorating a symptom accompanying diminished homeostasis, classified in class 424, subclass 439, 638,, 639,643, 646,655,667,682,702; class 514, subclass 563.
 - II. Claims 19-20, drawn to a method for improving metal taste, classified in class 424, subclass 439, 638,, 639,643, 646,655,667,682,702; class 514, subclass 563.
2. Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions, i.e., one is for improving the taste of mineral containing products, one is for treatment of symptom with diminished homeostasis. Further, search for invention Group I is not required for search for group II. Note the search is not limited to patent literature.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

If applicants elect Invention Group I, further species election is required.
4. This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 1617

Obesity (claim 9); anxiogenic symptoms (claim 10); premenstrual syndrome (claim 11); sensitivity to cold (claim 12); menopausal disorders (claim 13), sleep disorders (claim 14); and autonomic imbalance (claim 15).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 8, 16-18, 21 and 22 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. A telephone call was made to Mr. Goozner on November 30, 2000 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1617

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
